

## XXXVIII.—REPORT ON THE DISTRIBUTION OF CARP DURING THE SEASON OF 1882.

BY MARSHALL McDONALD.

In the inception of the work of carp distribution in 1879 the shipments were always in charge of messengers, who gave assiduous attention to the aeration and frequent change of water *en route*, accompanied the fish to their destination, and delivered them to the applicants or their authorized agents. The vessels employed in transportation were tin cans, having a capacity of from 10 to 15 gallons each. The number of cans taken in one shipment was usually twelve; namely, ten cans for fish and two for water. At first the number of fish to the can was limited to fifty, thus making a messenger shipment to consist of five hundred fish.

As the robust vigor and vitality of the carp came to be better understood and appreciated the number of fish permitted to a can was gradually increased, so that in the latter part of the distribution of 1881 single shipments of twelve and fifteen hundred fish were made by messenger to distances 900 miles from Washington.

With the increasing number distributed each year it was found impracticable to make the entire distribution by messenger service, both on account of the cost attending the same and the large force of experienced men it was necessary to keep in the field. Arrangements were therefore made to ship by express, special rates being arranged with the express companies. To an applicant receiving the usual allotment of twenty fish the cost of shipping packages weighing 100 pounds or more was very exorbitant, the rates ranging from 75 cents, to points near Washington, to \$10, \$12, and even \$15, to parties in more remote localities. To reduce this cost half cans, weighing proportionately less, were, by direction of the United States Commissioner of Fisheries, substituted for the ordinary 10-gallon transportation cans first employed. Meanwhile experiments were instituted for the purpose of determining the minimum volume of water and the minimum weight of vessel that might be employed for safe distribution of carp by express.

The results of these experiments, detailed in full in United States Fish Commission Bulletin, volume 1, page 215, showed that we might use tin cans having a capacity of 1 gallon for distribution to points distant in time from twenty-four to forty-eight hours from place of distribution. The experience of 1881 also showed that by the use of a transportation car, with refrigerator compartments, so as to enable us to control and keep down the temperature to 55° or 60° in the interior,

we could hold the fish in these small vessels for weeks with occasional changes of water, and then forward them by express several hundred miles. This method was applied in the trans-Mississippi distribution, made in the latter part of 1881, with the most gratifying results, nearly twenty thousand fish having been transported from Washington, and distributed to applicants in all parts of Texas, West Louisiana, Indian Territory, and Arkansas. In making the distribution of 1882 it was determined to put in full operation the new methods and apparatus of distribution. Meanwhile an additional refrigerator car, constructed according to the plans of Mr. Frank S. Eastman, was completed and ready for service. Car No. 1 was also remodeled to conform essentially to the new design.

The opening of the season of 1882 found us prepared with two cars complete in all respects for distribution.

The following programme of the organization and conduct of this work was therefore submitted, and being approved by the United States Commissioner of Fisheries, was carried out in all its essential details in the distribution of 1882.

#### 1. GENERAL PLAN OF THE DISTRIBUTION.

It is proposed that the distribution be made—

(a) By express, from Washington direct to destination, where the distance in time is not more than twenty-four or thirty-six hours, the shipping package being the ordinary 4-quart tin pail, the cost of which will be included in the express charges, and the pail kept by consignee. The cost of pails will be collected from the central express office at Washington.

(b) For points in States too remote from Washington to be reached by express shipments direct, or where the cost of express shipment entails a disproportionate charge on consignee, it is proposed to send our cars to central points of distribution in different sections of the country, the points being selected with reference to their facilities for distribution by express, and from these points to distribute by express in the same manner as indicated for express shipments from Washington; for this purpose a distributing agent will be left at such points to complete the work of distribution, the car returning to Washington for a new supply as soon as its load is safely deposited at destination and arrangements made to care for the fish until distributed.

The agent having completed the distribution at one point will be transferred to another, to meet another consignment, the movements of cars and distributing agents being so timed or regulated by telegraph that there will be no confusion, but all the distribution will proceed in a systematic and orderly manner.

It is proposed that the United States Commission in all cases bear the costs of transportation to the centers of distribution fixed upon, charges from these points to destination, and the cost of pail (to be included in express charges) to be paid by consignee. The entire cost to

applicants will range from 40 cents to 75 cents; in no case, probably, will it exceed \$1.

(c) Individual messenger shipments only to be resorted to in cases of imminent emergency. Such shipments are not usually satisfactory, and the cost of distribution in proportion to work accomplished is much greater for the Commission than in the methods (a) and (b).

## 2. PERSONNEL OF THE WORK.

For each car, one messenger in charge, two messenger assistants, one cook, and for the field work of distribution one or more distributing agents, as above indicated.

At central station, there will be needed in addition to the permanent force of the station, one good man to assist in making the shipments and to care for the carp awaiting distribution.

Each messenger in charge of cars will be charged with all property issued for the equipment or service of his car, and will be responsible for the same, so long as it remains in his possession, and will not be discharged from such liability until the same is returned to the central station and proper receipts obtained from store-keeper.

In addition to a property record he will be required to keep an account of all expenditures made: (1.) For the subsistence of himself and men; (2.) For all other expenses; (3.) The number of miles traveled, and required to report the same from time to time, the several reports covering the whole period of continuous service; the object being to show the cost per diem per man for subsistence and the miscellaneous expenses of the maintenance of car per mile traveled.,

## 3. ORDER OF DISTRIBUTION.

It is proposed that the distribution begin first in the New England and extreme Northwestern States, the theater of operations being shifted farther and farther to the South as winter approaches, the last work being done in the South Atlantic and Gulf States.

## 4. PRELIMINARIES TO DISTRIBUTION.

(a) Shipping-tag made of stout manilla paper, in the form of jacket and containing the return postal receipt. On the tag will be printed the instructions to be observed in transportation, one side being reserved for this, the other for the shipping address. Samples of these and the circulars for express work I have requested Mr. S. C. Brown to prepare and have ready to submit to you.

(b) In all cases where an application is on file in this office, or where distribution is to be made, or lists furnished by State commissioners, it will be necessary, several days prior to sending the fish, to mail a circular giving due notice of the time and manner of shipment, so that consignees may have due notice to prepare for and receive their fish.

Form marked M provides for this notice, whether delivery is made by messenger or through State commission. This, in conjunction with form N, to be sent to consignee by messenger or agent, provides for all cases.

In accordance with the programme Mr. George H. H. Moore was placed in charge of car No. 1, and Mr. J. F. Ellis in charge of car No. 2, Mr. George G. Davenport being designated as distributing agent.

The ponds having been drawn, the distribution was inaugurated by a car shipment to Boston, in which distribution provision was made for all applicants in the New England States, New York, and the northern half of New Jersey. From this time until about the 1st of February, when the distribution terminated, the cars were in continuous service.

In order to complete the work in the time fixed, it was necessary to open a depot of distribution at Atlanta for the supply of the South Atlantic and Gulf States. Mr. Davenport was ordered to this point, and having organized the station remained in charge until the completion of the work, the fish being forwarded to him from Washington.

The following is a summary showing the points of distribution in each State, the date, and the messenger in charge.

*Distribution of German carp in the United States for the year 1882-'83.*

State.	Point of distribution.	Messenger.	Date.

Complete details of the distribution arranged by States, Congressional districts, and counties is appended to this report. This distribution reached applicants in every State and Territory in the United States, except Montana. Fish were sent into 298 of the 301 Congressional districts and into 1,478 counties. The total number of applicants supplied was 9,872, and the total number of fish distributed 259,000; the average distance of applicant being 916 miles from Washington. The total mileage, counting all as single shipments from Washington to destination was 9,045,000 miles. The cars during the season traversed a total distance of 34,502 miles, of which car No. 1 traveled 20,601, and car No. 2 13,901 miles.
