

DREDGINGS OF THE TRAVAILLEUR IN 1882.

The *Travailleur* in 1882 continued the series of dredgings commenced in 1880 and 1881, and extended them from Cape Penas, on the north coast of Spain, along the coast of Portugal, the Gulf of Cadiz, and the coast of Morocco to the Canary Islands, through the strait of Bocayna (between Fuerteventura and Lanzarote), to Madeira, Lisbon, and back to Rochefort. Twenty-one hauls of the dredge were made, in from 100 to 3,700 meters (55 to 2,023 fathoms) of water. M. Alphonse Milne-Edwards was in principal charge of the natural history observations. A general report of the expedition was published in the *Revue Maritime et Coloniale*, February, 1883 (Tome LXXVI, page 454), and the details of position, etc., in the *Annales Hydrographiques*, vol. 5, p. 4, 1883.

The number of the *Annales Hydrographiques* containing these positions was found to be wanting in all the accessible libraries in the United States, and although ordered from France, failed to arrive in time to allow the positions to be included in this paper.
